

→ Requirement :

user shd be able to call a method  
by passing any no of arguments.

print() ; ✓      print(10, 20); ✓  
print(10) ; ✓      print(10, 20, 30); ✓

print(10, 20, 30, 40) X

```
class Project
{
- print() { }
- print(int i) { }
- print(int i, int j)
  { }
- print(int i, int j,
  int k) { }
}
```

Variable Argument → var args

→ it is represented using . . .

→ internally it uses the array

```
class Project
{
```

```
static void print ( int ... a )
                    ↗ var args
                    ↘ array
```

```
static void print ( int ... arr )  
{  
    }  
}
```

array  
def  
variable
